

Q/R Steerer Extender Users Instructions

The steerer extender fits to the top of the fork and locates on the 4-pointed star, the slot at the back of the extender should align with the vertical slot on the side of the Fork Sleeve when the handlebars are pointing forward. Ensure the steerer is fully pushed down before tightening the Q/R.

It is possible to orientate the handlebars at 90 deg increments, which can be useful for storing the bike in narrow spaces, or, when transporting the bike by car or train. To do this, the quick release lever needs to be released and the Extender lifted clear of the 4-pointed star, the steerer can then be rotated and reengaged with the 4-pointed star at the desired position.
